SIEMENS

Desigo™ RX

Room unit with PPS2 interface   QAX32.1

for use with: – devices of the ranges Desigo RXC, RXB, RXL, and RXA (PPS2)
 – Desigo PX Automation stations [1]
 – devices with a PPS2 interface

- **Room temperature measurement**
- **Room temperature setpoint adjuster**
- **Control mode selector switch (⏻ / Auto)**
- **PPS2 interface to controller**
- **Socket for commissioning and service tool or service terminal**

Use

The room unit is used in rooms controlled by an individual room control system, to measure the room temperature and for operation of a room controller.

It can also be used in conjunction with a Desigo PXC… automation station [1].

The room unit incorporates a socket for a commissioning and service tool or service terminal. This tool socket provides access via the PPS2 interface or via a bus system (e.g. LONWORKS® bus) to the connected individual room controller.

[1] If room units QAX32.1, QAX33.1, QAX34.1 or QAX84.1 are used in conjunction with a PXC automation station, the room unit will show the request of the user and not the effective state.

Ordering

When ordering, please specify the quantity, product name and type code.

Example:
30   Room units   QAX32.1

Equipment combinations

The room unit is suitable for use in conjunction with all controllers which incorporate a PPS2 room unit interface (e.g. Desigo RX, Desigo PX).
Mechanical design

The room unit is designed for surface mounting (with knock-outs for cable entry from the top or bottom) or for mounting on a recessed conduit box with the cables connected from the rear.

The unit comprises a housing and base unit, connected by releasable snap-fittings.
The base unit accommodates the screw terminals which have an integrated terminal strip.

The housing accommodates a printed circuit board, room temperature sensor element, setpoint adjuster, rocker switch for mode selection, plug-in connectors and a socket for the commissioning and service tool or service terminal.

Both the housing and base are made of plastic.

Base unit

Housing

Socket for the commissioning and service tool or service terminal

Operator controls and indication

Dial for stepless adjustment of the setpoint

LEDs to indicate control mode
Rocker switch for mode selection

Rocker switch for mode selection

The controller control mode can be selected on the basis of occupancy, using the rocker switch on the room unit (press left or right arrow). The current control mode is indicated by a LED.

Position	Control mode [1]
⏻	The controller operates at the setback setpoints (at night, or when room is unoccupied or occupied intermittently)
Auto	Comfort mode (room occupied)

1)   For details of these functions, refer to the application description for the relevant controller range.

Address plugs

Address plugs inside the housing
They allow setting the address in cases where several room units are connected to one controller.
The room units are delivered with address 1.

Disposal

The device is classified as waste electronic equipment in terms of the European Directive 2012/19/EU (WEEE) and should not be disposed of as unsorted municipal waste.
The relevant national legal rules are to be adhered to.
Regarding disposal, use the systems setup for collecting electronic waste.
Observe all local and applicable laws.

Engineering notes

The device receives its power from the connected controller via the PPS2 interface (extra low voltage). Only one room unit may be connected to a RX… room controller.

A maximum of 5 room units may be connected to a PXC… automation station (they are identified by different settings of their address plugs)

A twisted-pair cable is required for the connection to the controller.
Desigo RX uses four-core cables, Desigo PX uses two-core cables (see the respective installation guides). Screening is not required.

Mounting

- The room unit is suitable for wall-mounting and for mounting on a recessed conduit box.
- Do not mount in recesses, shelves, behind curtains or doors, or above or near heat sources.
- Avoid exposure to direct sunlight or draughts.
- The electrical wiring conduit must be sealed where it joins the room unit, to prevent the occurrence of draughts in the conduit which could affect the sensor.
- The specified ambient conditions must be complied with.
- Mounting instructions are printed on the room unit packaging.
- A mounting kit is included with the unit.

Installation notes

Local installation regulations must be observed.

Note! **The room unit is not protected against connection to AC 230 V.**

Commissioning notes

Response on start-up

After an interrupt of the PPS2 interface the communication will only be re-established when the connected controller polls the PPS2 addresses. The duration of the corresponding cycle is:

RXA: 10 sec; RXB, RXL and RXC: 3 min; PX: 30 sec.

The following routine occurs in the room unit when the power supply is connected (via the PPS2 interface) or after a reset via the controller:

Step	Function	Description
1	LED test	The LEDs are operated in sequence for 1 s each
2	Device ready	After a delay of 1 s the device will be ready for PPS2 communication. The actual control mode is displayed after a further delay of 5 s.

Technical data

Supply voltage	Operating voltage range	DC 12...15 V (SELV)
		DC 12…15 V class 2 (US)
	The room unit receives its power from the connected controller, via the PPS2 interface	
	Power consumption (from controller)	Max. 0.10 VA
Function data	Temperature sensor	
	Measuring element	NTC resistor
	Measuring range	0 ... 40 °C
	Response time	$\leq$ 8 min
	Accuracy (5 ... 30 °C)	$\pm$ 0.5 K
	Accuracy (25 °C)	$\pm$ 0.25 K
	Setpoint correction	
	Correction range (determined by controller)	max. $\pm$ 12 K (default $\pm$ 3 K)
	Accuracy over full correction range	10 %
	Indication (control mode)	2 LEDs, yellow
Interfaces	Type of interface between controller and room unit	PPS2 (point-to-point interface, Version 2)
	Baud rate	4.8 kbit/s
Cable connections	Connection terminals (screw terminals)	Stranded or solid conductors 0.8 ... 2.5 mm²
	Single cable length controller – Room unit	See Installation guidelines: Desigo RXC: CA110334, Desigo RXB & RXL: CM110381 Desigo RXA: CA2Z3884 Desigo PX: CA110396
	Cable type	2-core or 4-core, twisted pairs, unscreened
	Connecting cable for service tool	Off-the-shelf, max. 3 m
Protection data	Housing protection	IP 30 to EN 60529
	Protection class	III to EN 60730-1

Ambient conditions	IEC 721	Operation	Transport
	Ambient air conditions	Class 3K5	Class 2K3
	Temperature	0 ... 50 °C	– 25 ... 70 °C
	Humidity	< 85 %rH	< 95 %rH
	Mechanical conditions	Class 3M2	Class 2M2

Connection terminals

The tool socket on the room unit provides access to the connected individual room controller via the commissioning and service tool or the service terminal.

The bus cable (Terminals 3 and 4) is therefore looped to the tool socket (Pins 1 and 2). The bus cable is not affected by the room unit.

For connection of a service terminal, the PPS2 interface (Terminals 1 and 2) is also connected to the tool socket.
